## Brief about Programme & Company

**Kyrion Technologies Pvt. Ltd.** an IIT Delhi Alumni Venture, aims to lay a strong underpinning for the technical development of our country, by developing an active interest among youth in new technologies such as **Ethical Hacking & Information Security**.

Computer and Internet being the backbone of every institution, necessitates the measures to be taken to keep the data and network safe from unauthorized access. For this most companies go in for the help of Ethical Hacking, which makes them aware of the shortcomings in their security systems and help them overcome them as effectively as possible.

A recent study conducted by **NASSCOM**, the expected demand of Ethical Hacking professionals by the year 2012 would be around 1,88,000, as opposed to current availability of only about 22,000 professionals. This in itself is a great motivation for students to take up this **potential career option**. One can hope to be as on the seventh cloud if one gives his/her cent-percent.

across the country. (\*more details @ [www.kyrion.in](http://www.kyrion.in))
